

Likhitha Doddi

**SUO  ELECTION  
2025/2026**

**Faculty of Applied Sciences Student  
Representative Candidate**

L

Hello everyone! I'm Likhitha Doddi, a second-year Computer Engineering student with a deep passion for robotics, hands-on innovation, and strengthening our engineering community.

L

I

Over the past year as VP Internal of EngSoc, I've dedicated myself to fostering clear communication within our faculty, organizing large-scale events, and ensuring students have access to opportunities that build their confidence before stepping into the workforce. But I believe I can drive an even greater impact as the APSC Representative on the SUO Board.

A

This role would allow me to go beyond EngSoc's scope, creating spaces where engineers feel truly heard—where their concerns and ideas don't just echo in a void but reach the right decision-makers. My experience attending School of Engineering curriculum meetings has already given me a platform to voice student concerns directly to faculty. As an SUO representative, I would extend this advocacy even further, ensuring engineering students' needs are addressed not just academically but institutionally.

L

Platform points

Expand Industry Connections – I’ve already been working on industry relationships and sponsorships as the VP Internal for Okanagan Engineering Society. As APSC Rep, I’ll bring more companies for all majors to campus for networking and recruitment opportunities.

L

Support Engineering Clubs & Competitions – I’ll push for a separate allocation of funds for clubs heading to competitions, encouraging more students to represent UBC Okanagan at engineering events.

I

Subsidized Access to Learning Platforms – I’m currently working on securing discounted access to Coursera, OpenCV, Udemy, and other industry-relevant certifications. As APSC Rep, I’ll have the resources to make this a reality for more students.

K

H

A Cotton Candy Machine for EME – Engineers are stressed, and research suggests that cotton candy can boost willpower and focus. So why not? I will try. (And if nothing else, it will bring a little joy to our long days in the labs.)

I

T

Let’s build a stronger, better-connected, and more supported engineering community—together. Got questions? Ideas? Curious about the superpowers of cotton candy?
