

Ahab Siddiqui

SUO  ELECTION
2025/2026

**Faculty of Science Student Representative
Candidate**

Hey everyone!

I'm Ahab Masud Siddiqui, a first-year Computer Science major, currently interning as a Software Engineer at a Toronto startup while also aiming to be in Research with professors in Artificial Intelligence and Computer Science. One of my goals is to help create more opportunities for all science fields and to ensure that all students have access to the same valuable experiences that have helped me grow and break into the tech!

Being actively involved in multiple clubs—serving as Vice President of the Pakistan Student Association and Project Manager for Bolt Analytics—has taught me the power of collaboration, leadership, and inclusivity. Working with students to organize events and bring ideas to life has strengthened my ability to listen, understand, and take action.

More importantly, these experiences have deepened my passion for supporting students beyond academics—ensuring their mental, emotional, and physical well-being. I believe that a thriving student community starts with a strong support system, and that's exactly what I want to foster as your Faculty of Science Representative. To break barriers and help students succeed from day one. I will take the initiative to ensure you and your ideas are heard and made into reality, while also creating and expanding internship and research opportunities for everyone, ensuring that everyone has equal access to career-building experiences!
